

Muh Shouu Xixi

Type of Building: Hotel
Location of Work: Hangzhou, China
Month and Year of Completion of Work: 2018.8
Light Sources Used: LEDs

Muh Shouu Xixi Resort Hotel covers an area of 7,000 square meters with a landscape area of 36,000 square meters. It is located in Xixi wetland of Hangzhou. Five adjacent buildings are reconstructed from the buildings left behind there.

Lighting design was involved at the beginning of this project. The architecture and landscape were built relating to the mountains and rivers, and the hotel's demand for lighting was the same. On the basis requirement, the needs of lighting, the "natural" feeling was restored to the greatest extent, which was the soul of lighting design throughout all stages of the project.

The lighting of the hotel architecture and landscape exploit the design rhythm of bearing and combination, the surface light to show the aging texture of the rough materials, space and inner penetration for modern glass materials. Through the minimalism conception, the original environment background of wetland is strengthened, reflecting the atmosphere of harmonious coexistence between human and nature.

The path of hotel is covered with verdant vegetation on both sides, and the architectural custom made lanterns provide the main lighting of the path. Along with the winding terrain, the trees and lights appear randomly, of which is under calculations creating the atmosphere of "wild".

If architecture and landscape lighting is a dialogue with nature, the interior lighting is the poetry of the modern scholars' feelings, lighting design by light and shadow made by the day after tomorrow, shade, mix on the block surface of natural materials, create a rich oriental implicative beauty interiors, the choice of restraint on every items, show the nature of material and fine detail processing, born so let a person feel lighting, like the wetland forest tree out of the window, born from the nature, deep into the bottom of my heart.
